

CAPABILITY STATEMENT

2026

Complete conveyor lifecycle support

Site services | Belt and rubber | Workshop capability
Products | Reliability and condition monitoring

MACKAY - BOWEN BASIN - 24/7 BREAKDOWN RESPONSE

LOCAL CONVEYOR SPECIALISTS

Superior Conveyors is a locally owned and operated conveyor specialist based in Paget, Mackay. We support mining and CHPP operations, hard rock quarrying, ports, manufacturing, power, chemical processing, sugar and rail across the Bowen Basin and surrounding regions.

With more than 200 years of combined materials-handling experience, our team brings practical field knowledge, workshop capability and direct accountability to every job. We focus on improving reliability, eliminating repeat defects and lowering whole-of-life cost.

Maintenance & Shutdowns

Asset Reliability

ONE ACCOUNTABLE PARTNER

Mechanical services, belt and rubber work, workshop refurbishment, condition monitoring, component supply and clear completion reporting - coordinated through a specialist conveyor team.

Quality is something we take personally.

WHY SUPERIOR

Practical conveyor specialists with accountability from scope to handover.

DIRECT ACCOUNTABILITY

Hands-on oversight, clear responsibility and direct access to decision-makers.

CONVEYOR SPECIALISTS

Deep field experience across mechanical, belt, workshop, products and reliability.

SOLUTIONS OVER SYMPTOMS

Root-cause thinking aimed at repeat defects, maintainability and service life.

RESPONSIVE SUPPORT

Local fleet, workshop capacity and 24/7 breakdown assistance when assets are down.

QUALITY YOU CAN SEE

Measurements, testing, traceability, photos and practical completion reporting.

CLIENT-FIRST SELECTION

Products and repairs selected around the best asset outcome - not a one-size-fits-all catalogue.

SITE MECHANICAL SERVICES

From planned shutdowns to urgent breakdowns, our team provides end-to-end mechanical support for conveyor systems.

PLANNED WORK | SHUTDOWNS | BREAKDOWNS | DEFECT ELIMINATION

MAINTENANCE & PROJECTS

- Project management and supervision
- Scheduled maintenance and shutdown support
- Skilled maintenance labour and site support
- 24/7 breakdowns and call-outs

CONDITION MONITORING

- Conveyor audits and inspections
- Thickness testing and thermography inspections
- Belt alignment and tracking rectification
- Dust, spillage and containment improvements

REPAIRS, REPLACEMENTS & UPGRADES

- Guarding and safety components; structural remediation; transfer chutes, hungry boards and wear plates
- Idlers and frames; trackers and trainers; pulleys and drives; impact beds
- Belt cleaners and ploughs; hard and soft skirting; component replacements and upgrades

DEFECT TO HANDOVER

BELT & RUBBER SERVICES

Support for all conveyor belt types - installation, splicing, repairs, inspection and protective lining.

BELT INSTALLATION & SPLICING

- Belt replacement and installation
- Hot and cold splicing
- Mechanical fastener installation and repairs
- 24/7 breakdown belt repairs and call-outs

INSPECTION & QUALITY CONTROL

- Belt, splice and damage inspections
- Independent splice quality control
- Scanning, radiography and thickness testing
- Condition and damage reporting

RUBBER & LINING

- Hot and cold belt repairs
- Off-site belt repair and refurbishment
- Rubber lining and surface protection
- Rubber and ceramic chute lining

PULLEY ASSEMBLY, REFURBISHMENT & LAGGING

Pulley assembly and lagging, with inspection records from receipt to delivery.

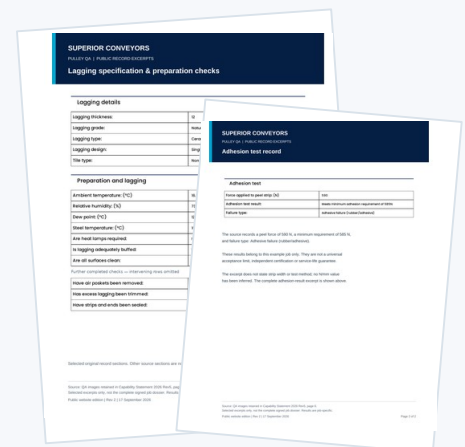

Completed pulley on transport cradle

- 01 Strip, assess and identify asset / drawing details
- 02 NDT verification of shell and shaft
- 03 Locking element, bearing, seal and housing assembly
- 04 Recorded torque and bearing-clearance checks
- 05 Rubber, polyurethane and ceramic lagging
- 06 Adhesion testing, final inspection and photo-documented QA dossier

TYPICAL QA DOSSIER

Asset and drawing IDs; NDT results; component details; torque and radial-clearance records; material batch and expiry; ambient conditions; adhesion test results; inspection photos.

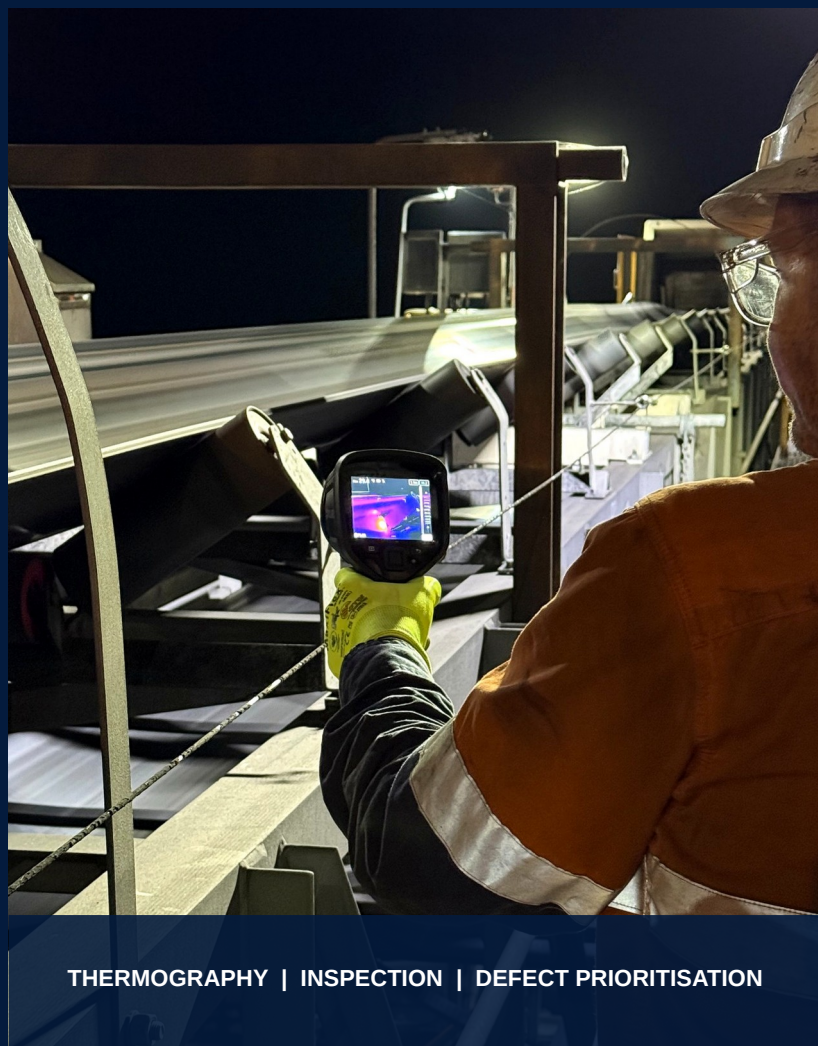

Clear documentation for client handover and future maintenance reference.

Selected ceramic-rubber QA records

RELIABILITY & CONDITION MONITORING

Field experience combined with practical condition monitoring to identify developing defects and prioritise the work that matters.

CAPABILITIES

- Thermography inspections and reporting
- Conveyor audits and inspections
- Belt, splice and damage reporting
- Belt alignment and tracking diagnosis
- Roller, bearing and pulley condition checks
- Conveyor belt thickness testing and reporting
- Defect prioritisation and actionable recommendations

AVOID

unplanned failure

TARGET

maintenance spend

REDUCE

repeat defects

IMPROVE

asset availability

PRODUCTS & ENGINEERED SOLUTIONS

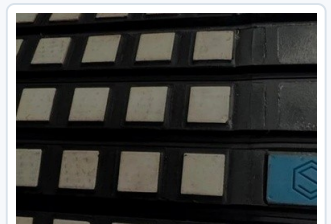

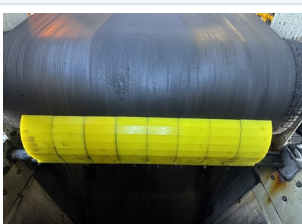

Products selected around application, maintainability and service life - not a one-size-fits-all catalogue.

MECHANICAL PRODUCTS

- Idlers: rubber, steel, HDPE, UHMWPE, composite, aluminium and weightometer
- Trough and return frames
- Drive, snub, bend and take-up pulleys
- Primary, secondary and retractable cleaners
- Pressure rollers, diagonal and vee ploughs
- Belt trackers and hydraulic trackers
- Skirting systems, wear plates and liners
- Impact beds, inspection hatches and guarding
- Spray bars and water-control manifolds

BELT & RUBBER PRODUCTS

- Fabric, steel-cord, chevron and cleated belt
- Mechanical belt fasteners
- Splicing and belt-repair materials
- Hot and cold repair materials
- CN filler and repair bands
- Rubber, polyurethane and ceramic lagging
- Sheet rubber and polyurethane
- Vulcanising equipment and specialised tooling
- Belt lifters and rated belt clamps

QUALITY, SAFETY & DOCUMENTATION

Professional delivery is more than completing the physical work. We plan, verify, record and hand over.

01

PLAN

Scope, client requirements, task controls and mobilisation.

02

EXECUTE

Appropriate PPE, competent personnel and controlled workmanship.

03

VERIFY

Measurements, torque, clearances, inspections and test results.

04

HANDOVER

Completion records, photos, findings and recommendations.

DOCUMENTATION TAILORED TO CLIENT REQUIREMENTS

- QA and inspection records
- Asset, drawing and conveyor identification
- Material traceability where applicable
- NDT and specialist test reports
- Recorded measurements and acceptance checks
- Before-and-after photography
- Defect, completion and recommendation reporting

Clear evidence. Accountable handover. Better maintenance history.

SUPERIOR CONVEYORS

PULLEY QA | PUBLIC RECORD EXCERPTS

Lagging specification & preparation checks

Logging details

Logging thickness:	12
Logging grade:	Natural
Logging type:	Ceramic
Logging design:	Single row (38%)
Tile type:	Non-dimpled

Preparation and logging

Ambient temperature: (°C)	18.6
Relative humidity: (%)	73.0
Dew point: (°C)	12
Steel temperature: (°C)	16.4
Are heat lamps required:	No
Is lagging adequately buffed:	Yes
Are all surfaces clean:	Yes

Further completed checks — intervening rows omitted

Have oil pockets been removed:	Yes
Has excess lagging been trimmed:	Yes
Have strips and ends been sealed:	Yes

Selected original record sections. Other source sections are not shown.
